Yellow-Legged Hornet Trap Instructions

Materials:

- 1-gal. or ½-gal. clear plastic container with screw-on lid
- 1.5-inch hole saw or box cutter
- Small drill bit
- Power drill
- 3/8-inch eye bolt with nuts and washers
- Cord or string
- Sieve

Assembly:

1. Trace a 1.5-inch circle on the side of the jug, about three-quarters of the way up.
2. Cut out the circle with a hole saw or box cutter.
3. Drill a 3/8-inch hole through the center of the lid.
4. Secure the eye bolt through the lid with the nuts and washers.
5. Tie the cord or string securely to the eye bolt.

Bait Ingredients:

1. 2 cups grape juice
2. 2 cups dark brown sugar
3. Enough water to dissolve the sugar

Prepare and Hang the Trap:

1. Pour the grape juice into the trap.
2. Dissolve the brown sugar in water, then pour the mixture into the trap.
3. Replace the lid and hang trap about 5 feet off the ground, away from busy areas.

Check and Report Trap Results:

1. Check the trap every 7–10 days.
2. Pour the contents through a sieve to collect the insects.
3. Record the inspection date and number of queens collected.
4. Photograph the queens; Clemson requires a photo with every report.
5. Use the Clemson Yellow Legged Hornet Reporting Tool. **Complete it while at the trap location.**
6. Refill and rehang the trap.
